Sept 17, 2016

To whom it may concern,

I am glad to write this reference letter to introduce Mr. Zhishun Xian. During the summer vacation, he enrolled in my Baidu Car Automation program. It fills me with great delight that in every single moment he exhibits keen enthusiasm for study. Based on his performance, I believe he will be valuable to your prestigious company.

As the matter of fact, I did have fewer contacts with Mr. Xian before he turned to sit in the front row. In the following time, to assist in releasing his academic confusion, I had more interactions with him after doing experiments on light sensors. Consequently, I got to realize his potential to be an expert in the Electronic Engineering and Software Engineering, especially in the realm of photoelectric technology and networking. The passion of leaning programming and optics motivated him to immerse into the in-depth study. I witnessed his cultivation of the prerequisite qualities, including the solid fundamental knowledge, outstanding logical thinking and remarkable reasoning ability. I remembered that in a chapter about the calculation of the optical path and the aberration theory, under my instructions, Mr. Xian could promptly understand the new terminologies, such as the spherical aberration and coma. Thereafter, he managed to direct other students to study the mathematical expression on the blackboard. Even more, at my request, he was able to proactively discuss about the applications of the aberration theory with others. I thought it was his good opportunity to improve the creativity and the ability to combine theory with practice.

Furthermore, he revealed his strong self-learning ability to me as well. When he studied about the new topics, other than seeking aids from me directly, Mr. Xian preferred to rethink the questions, integrate with the previous knowledge and made comprehensive analysis. He enjoyed the moment that he encountered the new things and found out the correct solutions. Simultaneously, Mr. Xian's unique ideas would contribute a lot to his experimental study in the graduate school. Thus, I considered all of his strengths would benefit his further development.

Considering the qualification, I believe that Mr. Zhishun Xian deserves the opportunity in your program. Should any information needed, please feel free to contact me.

Sincerely yours,

Jinkun Liao

Professor, Director of Integrated Optics Laboratory

University of Electronic Science and Technology of China (UESTC)
